

# Green Energy Product Application

## Energy-efficient Building

Energy-efficient building materials, efficient lighting systems, energy management systems and renewable energy applications are used to achieve energy savings and environmental friendliness in buildings.

## Renewable Energy

Convert wind and solar energy into electricity and cooperate with the energy storage system for power scheduling and utilization to promote sustainable development.

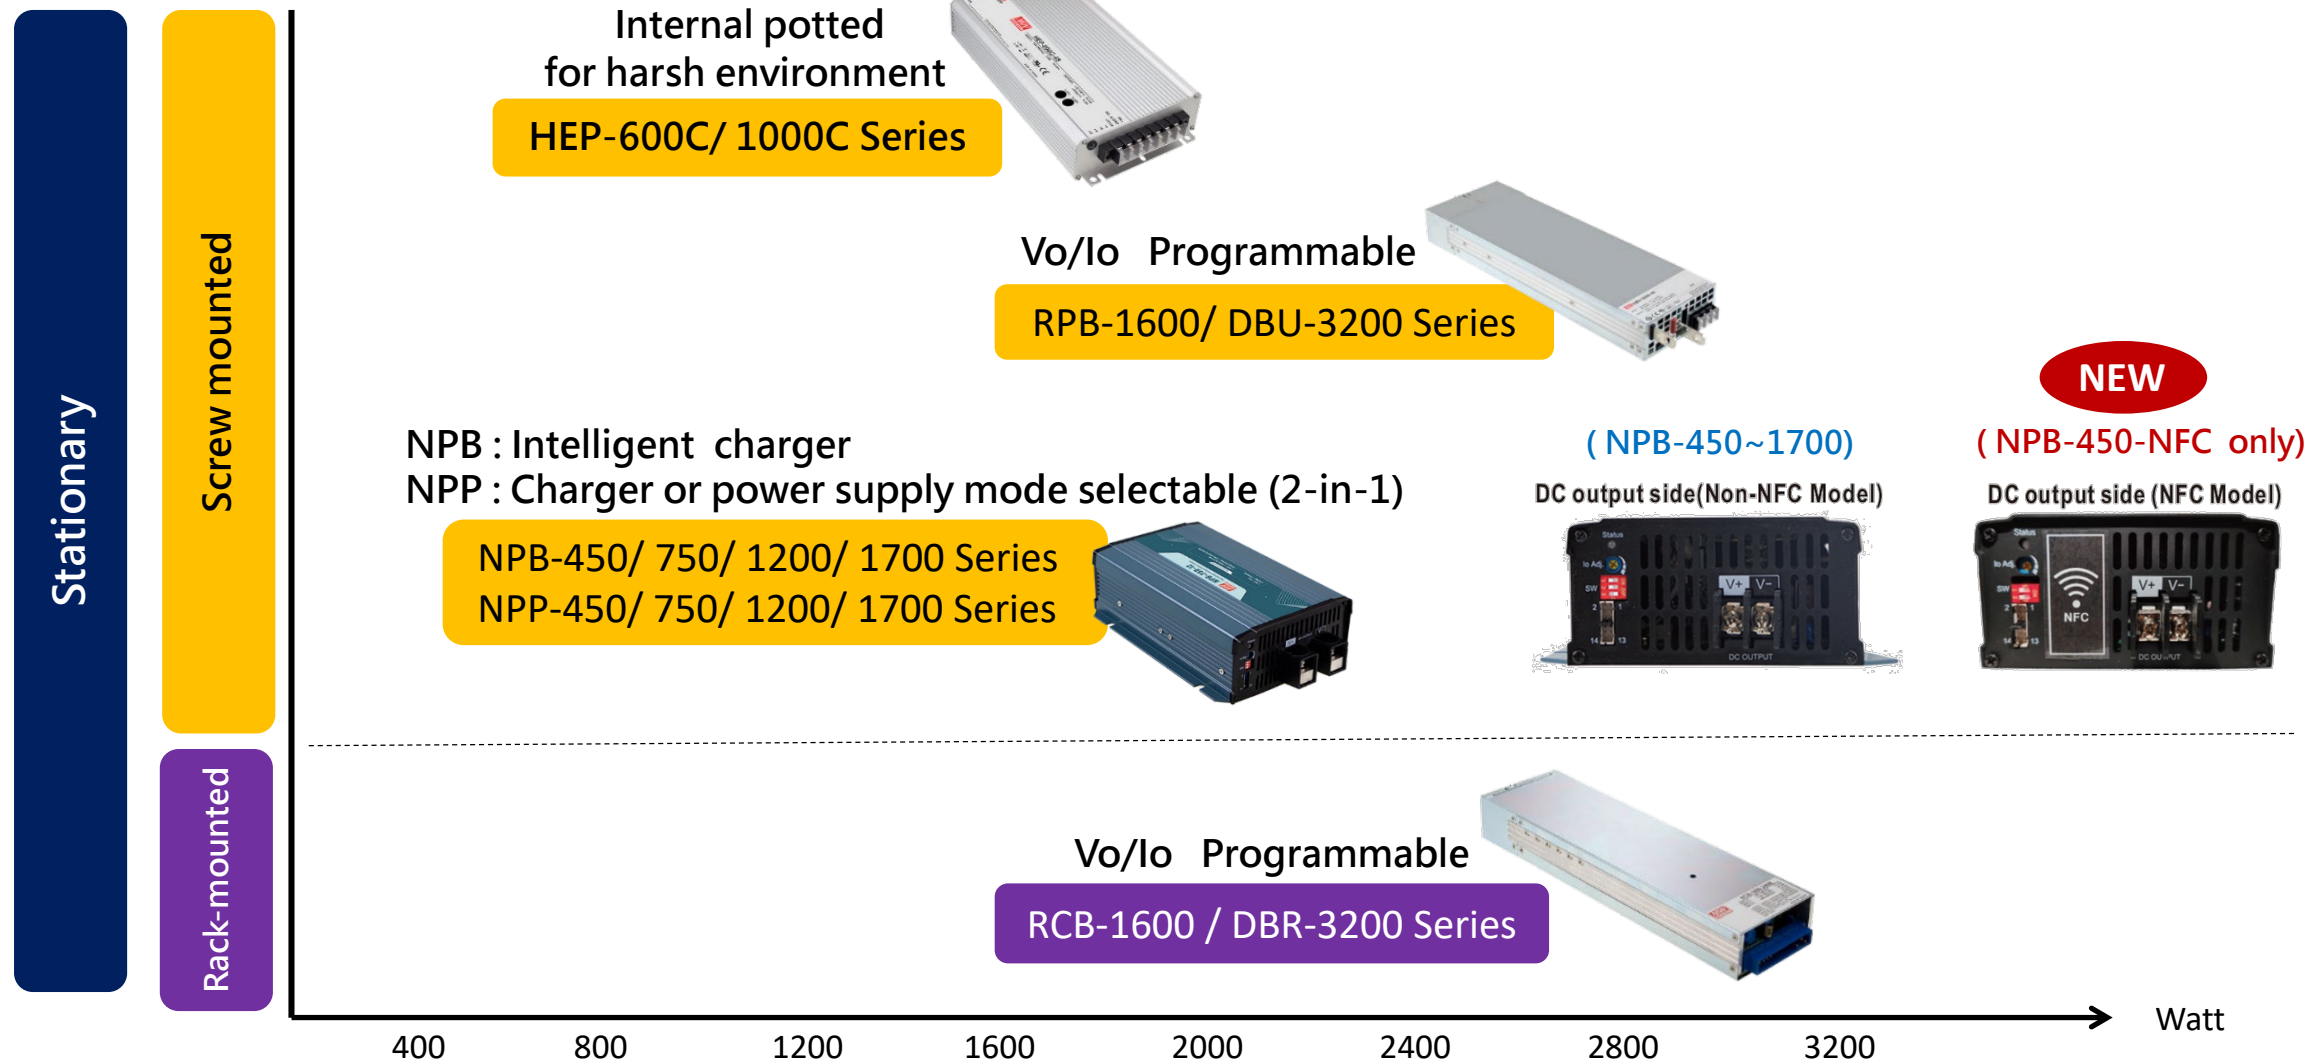

## Microgrid

Through power electronics and intelligent control technology, the intelligent management of power system is realized, and the efficiency and stability of power system are improved.
