

Intelligent Energy Product Application

B.A Control

Automation and information control technologies enable intelligent management of building equipment and systems to improve the energy efficiency, comfort and safety of buildings.

Lighting control

Electric curtain

Heating control

Switching interface

Digital security

Logic control

PWM control

Dimming control

CC control

CV control

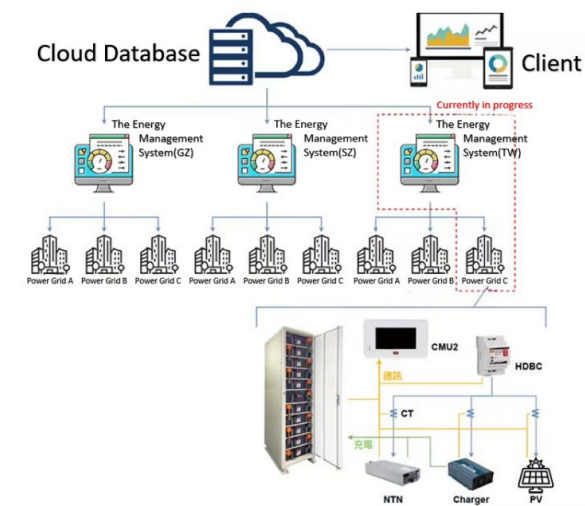

Automatic Control

Use control system technology to monitor, judge and regulate operations without human intervention.

Energy Management

Energy management involves green energy generation, transmission, storage and scheduling planning/control of electric energy sources.
